

ANSIBLE ROLES

ansible-galaxy init my_project

- Defaults -- main.yml
For writing the default values, basically variables with lowest priority
- Files
All the files related to this Role
- Handlers -- main.yml
For writing all the handlers
- Meta -- main.yml
It is a document file, which is used to writer all the metadata related to the Role
- README.md
A file created with all the basic information any person who wants to use this roles needs to know
- Tasks -- main.yml
To write down all the tasks
- Templates
To store all the Jinja related Template files
- Tests -- inventory -- test.yml
This is used for testing your role before full fledged implementations.
- Vars -- main.yml
All the Variables are stored here, at higher priority.

Tasks --- main.yml

```
---
# tasks file for my_project

- name: Copy a file
  copy:
    src: file1.txt
    dest: "{{ path_to_copy }}/abc.txt"
- import_tasks: task1.yml
- name: Copy a Jinja File
  template:
    src: template1.txt
    dest: "{{ path_to_copy }}/new.txt"
  notify: service_restart
- import_tasks: task2.yml
```
