Regular User to Regular User Connection

- Create Regular Users on both CN and MN's
- Establish SSH connection between these machines
- On CN, make the ansible directory in home directory of user
- Create "ansible.cfg" and "inventory" in this directory
- Make require entries in ansible.cfg
- Enter the IP's and the "ansible_user=" parameter in the inventory file
- Run "ansible all -m ping"
- It should work properly

ansible.cfg Presedence

1. Environment Variable ANSIBLE_CONFIG= <path to ansible.cfg>
Command:
export ANSIBLE_CONFIG=/home/control/ansible/ansible.cfg

2. Search for ansible.cfg in present working directory

3. Search for an .ansible.cfg (hidden) in present working directory

4. It will consider the global config file located at /etc/ansible/ansible.cfg
